

AIR DUCT CLEANING

- Improve indoor air quality
- Improve efficiency of heating and cooling system
- Commercial and residential
- H.E.P.A Air Sweep System

Before Cleaning

After Cleaning

Teasdale Fenton uses only the most advanced H.E.P.A. (High Efficient Particulate Air) Filtered Air Duct Cleaning System available. It is designed and manufactured by Nikro Industries, one of the leading manufacturers of H.E.P.A. Filtered vacuum equipment in the United States. All of our equipment is manufactured to meet or exceed OSHA, EPA, and NADCA Standards for cleaning the air or nuisance dusts.

Our powerful H.E.P.A. Filtered Vacuum System will first be connected to your air duct near your furnace. Various tools will then be used to dislodge the contaminants and debris in your air ducts. The powerful vacuum will pull the contaminants out of the ducts and through the filtration system; returning clean air back into your environment. Once your system is cleaned, all access holes are resealed, returning your duct system to its original clean condition.
