- Proud to use the Butler System which is the #1 van powered carpet cleaning system

Whether your business has 1,000 or 100,000 square feet of carpet, you have an enormous investment in the initial cost. The need to take care of this investment becomes clear as you start to witness premature wear and aging. At Teasdale Fenton, we are the authority in restoring and maintaining your business's flooring. Don't settle for anything less than being part of Teasdale Fenton's family of commercial clients.

We take pride in our reputation, experience, education, systems, and guarantee. Teasdale Fenton is an IICRC certified firm, the world's most recognized body of certification for carpet and upholstery cleaners. We hold multiple cleaning technician certifications.

Industry's most powerful truck mounted "Hot Water Extraction" equipment (HWE)

Teasdale Fenton's fleet of truck mounted hot water extraction equipment is the most technologically advanced HWE system available. We use the Butler truck mounted system, considered # 1 in the industry.

High Performance Portable Extraction goes where no truck mount can go (HPPE)

Due to many factors such as security access or project location, there is no "one-size-fits-all" answer, despite what you may have ever been told before. High Performance Portable Extraction (HPPE) is another alternative Teasdale Fenton offers to keep your carpet looking its best. Using only the most powerful portable systems available, Teasdale Fenton utilizes rotary extraction heads with the proper chemistry, outperforming our competitors "best" results.

Encapsulation Technology (ET) can take your business to a whole different level

Encapsulation is a perfect choice for customers in high-traffic or large commercial settings with the need to clean their carpeted surfaces in an on-going manner. First, we emulsify all the oil and physical contaminants within your carpeting, surround each molecule with an acrylic-polymer barrier that prevents it from reattaching itself to the fibers while drawing it to the surface using controlled evaporation. Approved by all major carpet mills, encapsulation cleaning could be the perfect option for your commercial grade olefin, polyester or nylon surface.
